

Safely Back to the Moon

SAFE EARN

Safely Earning. Safely Mooning.

SafeEarn is BSC's first double-reflection token allowing for massive gains just by holding. By injecting itself with mechanics from multiple popular tokens, SafeEarn is the easiest to use earning platform for all.

DOUBLE REFLECTION

SafeEarn pays holders in SafeMoon, DeFi's largest token. An 8.5% payout based on transactional volume creates massive earnings for holders and allows SafeEarn to navigate the DeFi space in more ways than one in development and marketing.

MOONSHOT BUY BACK

SafeEarn uses a "Moonshot" buyback system that consistently collects BNB to inject back into the token. This manual feature is a keep component to maintaining community. The Moonshot feature additionally allows for "Autoboost," a unique buy feature that makes smaller buys at opportune moments.

ANTI-WHALE

The mechanics of the token prevent buyers or sellers to control more than .1% of the token's current supply at any given moment. This keeps the charts healthy, prevents dumps, and allows for many to hold a fair percentage of tokens.

SAFELY BACK TO THE MOON

With SafeEarn

BSC's FIRST double-reflection token.

PURPOSE

WELCOME

The intention of this whitepaper is to provide insight into the team, function, and life of SafeEarn, a token built on the Binance Smart Chain. This whitepaper covers multiple aspects of everything going on so investors can confidently understand and learn about how their funds are used.

DISCLAIMER

This whitepaper does not aim to offer any financial advice. It is purely a document that gives factual information about SafeEarn. Any information construed as financial advice is at the behest of the reader alone. SafeEarn accepts no responsibility for loss of funds or information gathered from sources outside of official documentation.

TOKEN OVERVIEW

HYPER-DEFLATIONARY ASSET

BUILT TO GROW, EARN, AND SUCCEED IN THE DEFI SPACE

ABOUT

SAFEARN was created initially with a first version that with a really low liquidity with no anti-whale measure and ultimately failed. However, because the sentiment of the token was so strong, the community rallied to release a new version. The new version was created after merging the team of an unreleased token into SafeEarn as well as their seed money to have a high marketing and development budget.

Many who lost funds in the failure of V1 of SafeEarn were refunded by the team, to increase trust and transparency in moving forward. The refunds totaled 50% of the entire budget and lead the path to a great future for SafeEarn.

Instead of launching a second time with a low initial liquidity, a presale was held that sold out in mere seconds, both for those whitelisted and those who were able to get in at public sale. SafeEarn then immediately began on its development roadmap and identified itself as a major earning platform in the DeFi space.

VISION AND MISSION

VISION

To enable token holders to earn money passively in the form of SafeMoon reflections, and in other ways that lend to SafeEarn leading the charge in transparency, development and community in DeFi.

MISSION

SafeEarn's mission is to assist tokens on the Binance Smart Chain that suffer from low liquidity, variance in transactional volume, and tokenomics that that would benefit from being boosted. The ultimate goal is to give passive income opportunities to holders of those tokens.

OUR TEAM

UNDER PROMISE, OVER DELIVER.

SafeEarn consists of experience in development, marketing, and management.

TEAM WORK

ASTRO DUDE - CEO

Original creator of v1 SafeEarn. Professional manager of people, projects and success. Long history of front-end development and hard work in the DeFi industry.

WOOFY - CTO/CFO

Lead developer behind SafeEarn. Master in Solidity, Scala, web3 and ML. Big brain behind development and financial movement of SafeEarn.

ALMIGHTY ROVER - CMO

Lead marketer for SafeEarn. Degrees in marketing and creative advertising, long history in sales and public speaking. Big brain behind scaling to wider audiences.

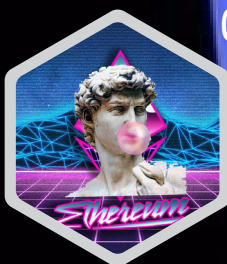

WHITE GOODMAN

Administrative Lead and Project Manager

CARL VOLTS

Director of Foreign Relations

CRYPTO SYNTHETIC

VP of Marketing

SPUTNIK MCGAVIN

Marketing Manager

Community Manager

OUR TOKENOMICS

SAFELY EARNING. SAFELY MOONING.

We have carefully designed our tokenomics to maintain longevity and a healthy chart.

8.5% AUTOMATIC SAFEMOON DISTRIBUTION

When you buy the token, you are added to a list of people that are subject to redistributions. The contract, on each transaction, handles redistributions to a few of the addresses on the list, on a first-to-last basis. Once it goes through the whole list, it starts again. This means your reflections are always in a "queue" until they are released. Our aims to reduce the queue time by a factor of 10x by the end of August.

DOUBLE REFLECTIONS

The SafeEarn contract is the first on the Binance Smart Chain to offer double reflections. By receiving SafeMoon you're able to compound your earnings by SafeMoon's 5% reflection.

2.0% LIQUIDITY GENERATION

2% of all transactions will deposit into the liquidity pool to elevate it. This sustains the life of the token.

HYPER DEFLATIONARY

The mechanics of the token allow for the total supply to decrease at a rapid rate when used in conjunction over time.

3.5% BUYBACK ACCUMULATION

3.5% of all transactions are added to a buyback wallet. This wallet performs buybacks manually in the form of "MoonShot" and "AutoBoost." All buyback tokens are burned.

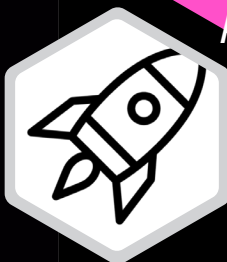

MOONSHOT BUYBACK

The MoonShot buyback system makes use of the buyback wallet by purchasing tokens in a bulk transaction, which shoots the price of the token as well as the marketcap to a new level, increasing the floor.

1% OPERATION FUNDING

1% of all transactions is distributed to our marketing wallet. These tokens are LOCKED and vested weekly to the team.

AUTOBOOST

The AutoBoost buyback is a manually started function that buys back against sell action to keep the order book green, a key metric in marketing.

ANTI-WHALE

The anti-whale mechanic disallows sellers to offload more than 0.1% of the entire supply of the token. This prevents coordinated dumping of tokens and encourages long term holding.

LOCKED TOKENS

The developer wallet holds 7% of the entire supply that is entirely LOCKED and vested weekly. This is in collaboration with the locked liquidity pool, to increase trust from new investors.

SAFEARN DAPP

UNIQUE TOKEN MANAGEMENT

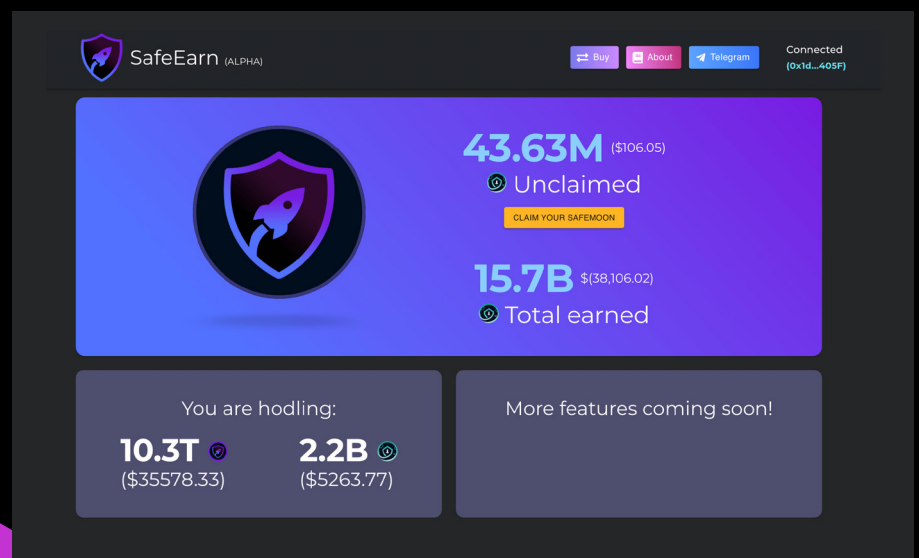

Proprietary and informative for all earners.

The dApp

The SafeEarn dApp is a suite of tools designed to make buying, selling and holding easier. It is constantly updated with new features to give confidence to holders about their earnings in an easy to use format.

The dApp is compatible with all devices and its primary function is to allow holders to claim their reflections of SafeMoon before the contract's mechanics distribute them.

Join the official SafeEarn Telegram or Discord to get assistance with the dApp or use the Feedback feature to report a bug!

A blue rectangular button with the text "Connect Wallet" in white.

CONNECT WALLET

In order to use the dApp and begin viewing the suite of tools you must connect your wallet.

Connecting to the dApp ONLY allows the web3 application to read your public address. It does not require any permissions beyond viewing what is already on the blockchain, so you can rest assured that your funds are not able to be accessed in any way.

Once connected you will be able to view your holdings and earnings and make use of any other features available.

A yellow rectangular button with the text "CLAIM YOUR SAFEMOON" in black.

CLAIM SAFEMOON

If you do not want to wait until the smart contract distributes your earnings, you may claim your SafeMoon early by clicking the claim button.

This will allow you to receive your earnings directly into your wallet. In order to use it you must be connected and pay the network/gas fee to receive the tokens.

This function simply creates a transaction between your wallet and the contract to receive, and does not require you to approve spending tokens.

You are hodling:

4T
(\$14164.91)

75.7M
(\$160.30)

HODL

This section displays your actual current holdings in real time with a USD value. Once connected you will be able to see this immediately to track what is in your wallet.

HODL stands for Hold On for Dear Life and it's a popular term used by investors who are able to resist selling in a time of negative price movement.

OTHER FEATURES

New features are regularly added to the dApp from time to time depending on current promotions, token development or updates.

Find out more about them and their usage by joining the official SafeEarn Telegram or reading about them online.

SAFESWAPPER

Fast & Easy way to Buy \$SAFEARN

Don't worry about any DEX, Slippage, errors, nothing! \$SAFEARN straight to your wallet!

You can also send BNB directly to the contract:

MARKETING

A CALCULATED EFFORT

An overview of strategies and goals.

PAID ADS

The strong team behind SafeEarn has devised a content marketing strategy that involves getting the attention of social media users by paying for ads without directly advertising the currency. Ads will be seen on Reddit, Twitter, Facebook and more.

REAL WORLD USE

SAFEERARN is a real platform for earning money by being tethered to its unique double reflection system. Marketing this project will rely on attracting new holders who may not already be involved in DeFi.

PROMOTIONS

Airdrops, contests and promotions are an essential piece of bringing in new investors and getting current ones excited. SafeEarn aims to always host competitions in rotation to continue to provide content for marketing and more.

MARKETING

SAFELY BACK TO THE MOON.

Using funds for brand awareness and consistent growth.

INFLUENCERS

Getting the involvement of influencers is crucial to the development and life of the token. Studies show that if a popular influencer advertises a product, their followers will buy it at a rate of 1:10.

SAFEMOON

Without shame, the SafeEarn team aims to leverage its unique SafeMoon reflection system to enable current SafeMoon holders to begin increasing their reflection by holding SafeEarn. With more than 2,000,000 holders, from a marketing standpoint it provides a large demographic to approach.

PARTNERSHIPS

The unofficial partnership with SafeMoon through the token mechanics also lends for the ability of partnering with other tokens in the future.

MERCHANDISE

SafeEarn's logo aims to be visible and known on 7 continents. By giving influencers unique merchandise options and providing a store for holders to buy from, holders will become walking advocates for the platform.

FREQUENTLY ASKED QUESTIONS

HELP! I HAVEN'T RECEIVED MY REFLECTIONS!

If the airdrop of your reflection is late, it is due to BSC network congestion which is causing delays and traffic buildup. However, rest assured that your SafeMoon earnings are calculated and accumulating for you in the background. We endeavor to airdrop them into your wallet once traffic issues are resolved without costing you any gas fees.

CAN I RECEIVE MY REFLECTIONS EARLY?

If you claim manually, it will cost you gas fees. However, procedure to view as follows: on your web3 dApp browser enter <https://safeearn.app>. Then connect your wallet to see your balances. Then if you wish you can claim your reflections by pressing the "CLAIM YOUR SAFEMOON" button.

AM I REALLY GETTING "DOUBLE REFLECTIONS?"

Double reflection is a unique feature of Safeearn's tokenomics. By just holding your Safeearn tokens, you receive an 8.5% reflection reward in SafeMoon tokens, which in turn receives another 5% on those rewarded tokens from SafeMoon's own reflection system.

IS THE TEAM DOXXED?

The SafeEarn team is not doxxed, but instead they have completed audits and performed a KYC with a third party. This ensures mutual safety for all parties without compromising anonymity.

I'M USING TRUST WALLET AND UNABLE TO ACCESS THE DAPP

For anyone who has issues with using TW on our DApp or other DApps on iPhone, this issue is caused by Apple forcing TW to remove the DApp browser to remain listed on the app store. Reference can be found in the following article <https://community.trustwallet.com/t/dapp-browser-removal-on-ios-version-of-trust-wallet/212293>. However, we aim to have a solution ready for the next main release of our DApp (alpha is a pre-release). In the meantime, you may use Metamask and their DApp browser. Kindly note that the DApp pre-release was a positive gesture from our developers to give you a glimpse of what is possible when they dedicate their time to serve our community with new innovations. Please trust the process and rest assured that your earnings are safe, and that we have more innovative features coming your way in the near future.

IS THIS ENDORSED BY SAFEMOON?

Currently no, but SafeEarn is working to earn their trust and form a logical partnership in the future.

HOW DOES THIS TOKEN BENEFIT SAFEMOON?

In order to distribute SafeMoon to holders of SafeEarn, SafeMoon must be purchased- at current value with all taxes. This not only benefits holders by being a part of their reflections, but also adds to the overall supply burn.

CAN I JOIN THE TEAM?

Our team is always growing in new ways. We have active partnerships with influencers as well as a strong community moderation team. If you'd like to get involved in marketing or development, send us an email!
